WIRE STITCHED BOXES

Versatile and comparatively inexpensive, wire stitched boxes are simple, strong and are made in many different styles.

Uses include storing and transporting documents, costumes, photographs and all forms of data and records. All boxes are made to individual specifications and Ryder's have in their history made thousands of different sizes.

Boxes can be made in a selection of low-acid, acid-free and recycled boards: 1900 micron kraft lined 'low-acid' board (pH 6.5-8), which conforms to BS 5454 and is our best seller where durability and economy is important. We have two full archival quality boards (pH 8.0) in 1300 micron Grey/White or 2000 micron Sand/White. To complete the range we now offer our new 1900 micron Buff Recycled Acid-free Millboard (pH 8.5) which is more 'environment-friendly' and offers value and strength where full protection against acid ingress is required.
